

The Most Powerful AI Partner for Safer, Smarter, Faster EHS Performance

AI Copilot

AI Copilot is your always-on EHS AI assistant — built to think ahead, surface hidden risks, improve data quality, and help teams take the right actions faster.

This isn't generic automation — Copilot is integrated across the full EHS lifecycle, improving reporting, hazard detection, analytics, insights, and corrective actions.

- ✓ Detects SIF precursors before they escalate
- ✓ Improves reporting accuracy and completeness
- ✓ Analyzes photos for hazards
- ✓ Summarizes documents with actionable insights
- ✓ Recommends corrective actions instantly
- ✓ Boosts data trust and operational decision-making

01 >> AI Insight Chatbot

Your virtual EHS data analyst for forms and reports.

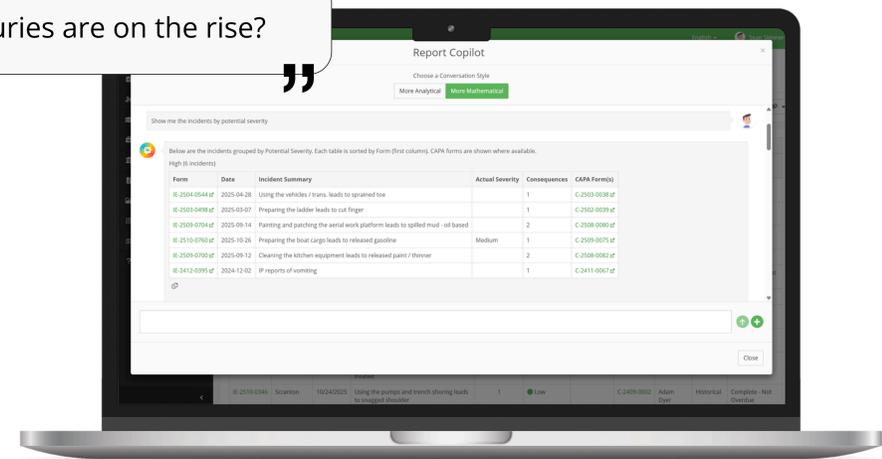

Turn any dataset into conversational insights without spreadsheets. Ask natural language questions to:

- Summarize trends and root causes
- Compare form/report data without manual analysis
- Reveal pattern recognition and recommendations
- Accelerate understanding with simple prompts

Smarter Analytics

Insight Chatbot and Document Copilot eliminate manual work and reveal insights instantly — without Excel or BI tools.

“What types of injuries are on the rise?”

02 >> AI Field Suggestion

Smarter, more accurate safety reporting.

Copilot prompts users with context-aware suggestions when entering form data so reports are:

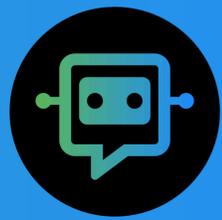

- More descriptive
- Less ambiguous
- Higher-quality for downstream analytics
- Faster and more complete from the start

Enhanced Data Precision

AI Field Suggestion ensures reports have the detail safety teams need to make informed decisions.

Built for Real EHS Workflows

Copilot AI is embedded across your EHS workflows — no exports or extra tools, delivering role-based, context-aware insights.

By catching risk early, Copilot saves time, reduces cost, and most importantly—protects lives.

03 AI SIF Precursor Detection

Spot warning signs before they become serious.

Copilot analyzes safety forms (incidents, audits, observations, CAPAs) to identify serious injury and fatality (SIF) precursors, flagging high-risk conditions earlier and enabling proactive intervention.

Predictive Risk Prevention

SIF Precursor Detection and Vision AI help organizations act before incidents occur.

05 AI Document Copilot

Instant summaries, insights & action plans from PDFs.

Copilot analyzes any PDF (SOPs, vendor docs, training, audits) and generates:

- Compliance requirement summaries
- Key risk highlights
- Actionable steps & training guides
- Communication plans

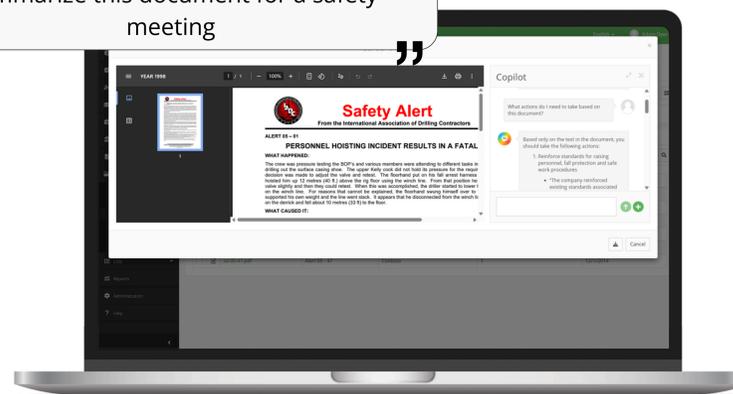

04 AI Data Quality Analysis

Cleaner inputs = smarter outputs.

AI scans form submissions for missing or inconsistent data, driving:

- Higher reporting accuracy
- Trust-worthy dashboards & analytics
- Consistent records across teams
- Better decision-making with reliable data

“ Summarize this document for a safety meeting ”

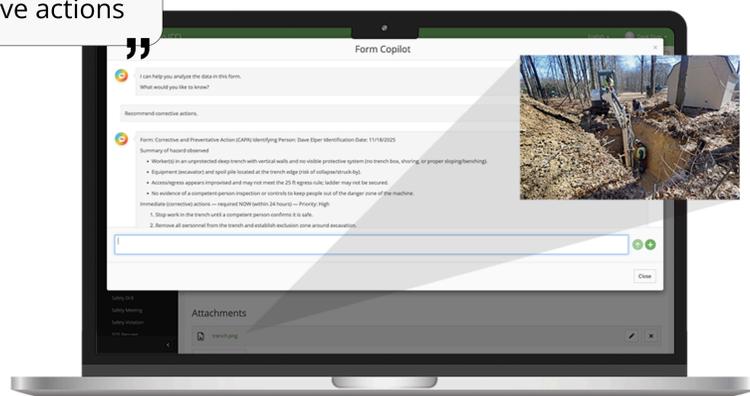

06 AI CAPA Copilot

Corrective actions at the click of a button.

Embedded in CAPA worksheets, Copilot:

- Recommends corrective actions automatically
- Auto-populates findings and action descriptions
- Speeds corrective action creation
- Improves consistency across your program

“ Recommend corrective actions ”

07 Vision AI

AI that “sees” hazards through your photos.

Copilot understands images attached to forms. It can detect:

- Unsafe conditions in observations
- Missing PPE
- Environmental exposures
- Workspace hazards

Photos become real data, fueling richer insights and higher data fidelity.

Faster Corrective Actions

CAPA Copilot accelerates response times and improves corrective action consistency.
