

Legal Register Module

EHS Insight's Legal Register module gives EHS teams a centralized way to manage all environmental, health, and safety regulatory obligations in one place. Instead of tracking requirements across spreadsheets, documents, or disconnected systems, organizations can maintain a single, structured, and continuously updated register inside EHS Insight, designed to move compliance management from static tracking to active execution. Your team always knows what's required, what's changing, and what needs action.

Comprehensive Legal Register Management

EHS Insight brings clarity, structure, and control to regulatory compliance, ensuring obligations are visible, applicability is defined, and compliance is actively executed at every site, region, and business unit.

Centralize Regulatory Obligations

Consolidate all EHS legal requirements into one structured, searchable system, reducing fragmentation and minimizing the risk of missed obligations across sites, regions, and business units, with references to external regulatory sources for traceability.

One Source of Truth

Sync With Regulatory Content Providers

Integrate with regulatory content providers such as STP RegHub or Enhesa to automatically sync up-to-date obligations, track changes at the citation level, and trigger structured review workflows whenever regulations are updated.

Stay Ahead of Change

Connect Compliance to Execution

Link obligations directly to Compliance Tasks, Documents, and Question Sets so compliance is actively managed, not just documented. Regulations connect directly to the actions that fulfill them.

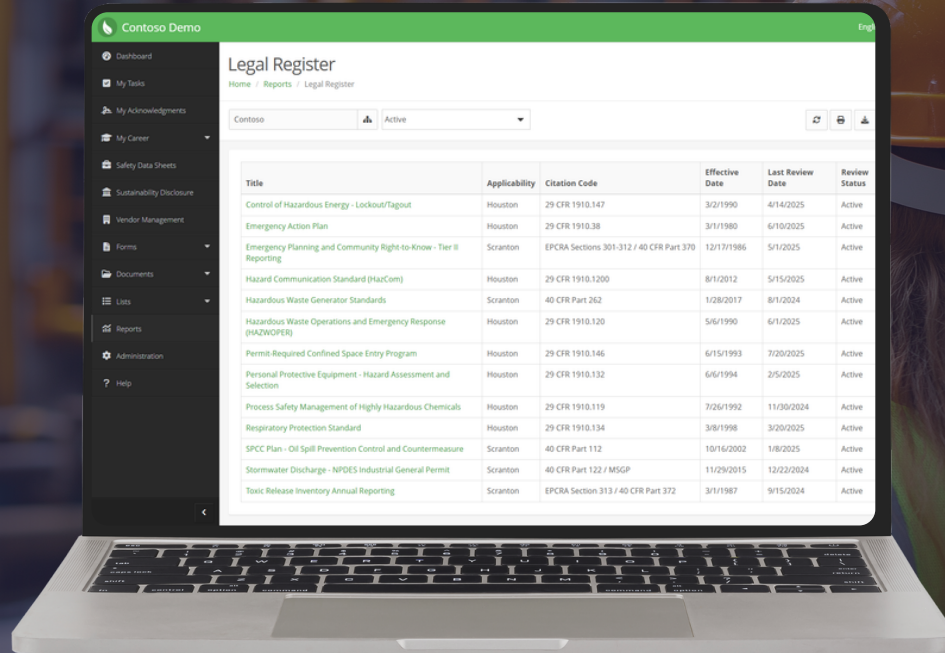

Turn Obligations Into Action

Core Capabilities

- ✓ Maintain a Centralized, Searchable List of All EHS Legal Obligations
- ✓ Link Obligations to Compliance Tasks, Documents, and Question Sets
- ✓ Sync Regulatory Content From STP RegHub, Enhesa, and Other Providers
- ✓ Assign Applicability Across Sites, Regions, and Business Entities by Jurisdiction
- ✓ Track Obligations Through Active, Needs Review, and Archived Statuses
- ✓ Report on Obligations, Review Status, and Linked Compliance Task Counts

Use Case

A multi-site manufacturer operating in three states struggled to keep track of which environmental and safety regulations applied to each facility. The Compliance Director built the company's Legal Register in EHS Insight, capturing every obligation with its summary, applicability, and metadata, and mapping each one to the appropriate business entities by jurisdiction. Obligations were linked to Compliance Tasks and supporting Documents so each requirement connected directly to the work that fulfills it.

With a regulatory content integration enabled, regulatory updates synced automatically. When a state air regulation changed, the affected obligation moved to Needs Review status and triggered a structured review workflow. During the annual ISO 14001 audit, the team used the Legal Register Report to demonstrate exactly what obligations existed, where they applied, and how each was being managed, with linked task counts showing compliance execution at every site.
