

USE CASE: SIMPLIFYING SAFETY FOR A GROWING CONSTRUCTION COMPANY

CUSTOMER PROFILE

Industry: Commercial & Specialty Construction

Employees: 120, 1 Safety Manager

Operations: 8 Active Jobsite Across Two States

Solution: EHS Insight's Safety Management Platform

CHALLENGE

As the company grew from a small contractor into a regional operation, managing safety and compliance became increasingly difficult.

Like many small construction firms, the team relied on a mix of paper forms, spreadsheets, and shared drives to manage incidents, inspections, training, and compliance tasks.

- **Incident reports were delayed or incomplete**, often submitted days after an event
- **Inspections were inconsistent** across jobsites and supervisors
- Training and certifications were tracked manually, increasing the risk of expirations
- **Compliance tasks were scattered** across spreadsheets and emails
- The safety manager spent more time managing paperwork than improving safety

SOLUTION

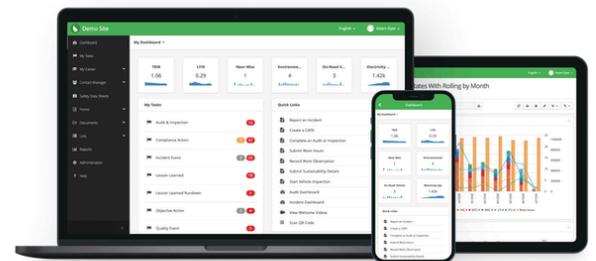

The company implemented EHS Insight to replace paper and spreadsheets with a single, easy-to-use safety platform.

Deployment focused on fast adoption, and implementation in under 30 days, with minimal configuration and training.

Measurable improvements were seen in less than 6 months.

WHY EHS INSIGHT WORKED FOR THIS GROWING OPERATION

- **Easy to use for supervisors and field crews**
- **Fast to implement without heavy IT involvement**
- **Mobile and offline-ready for active jobsites**
- **Affordable and scalable as the company grows**
- **Replaced spreadsheets and paper with one simple system**

"Before EHS Insight, we were buried in paperwork and spreadsheets. Now our supervisors report incidents in minutes, inspections are consistent, and I finally have time to focus on improving safety instead of chasing forms."

— **Safety Manager**
Regional Construction

EHS INSIGHT SOLUTIONS IMPLEMENTED

Incident Management

- Mobile reporting from the jobsite — online or offline
- Standardized investigations and corrective actions
- Automatic OSHA-ready logs

Audit & Inspection Management

- Digital site and equipment inspections with mobile checklists
- Photos and findings captured directly from the field
- Corrective actions tracked to closure

Training Management

- Role-based safety training assignments
- Automated tracking of completions and expirations
- Real-time visibility into workforce readiness

Compliance Tasks & Corrective Actions

- Centralized tracking of permits, inspections, and follow-ups
- Automated reminders and deadlines
- Simple audit trails for inspections and reviews

RESULTS & KEY PERFORMANCE INDICATORS

Within six months of going live, the company achieved measurable improvements:

Safety Performance

- ↑ 58% increase in near-miss and observation reporting
- ↓ 27% reduction in repeat incidents through faster corrective actions
- ↑ 92% of incidents reported within 24 hours

Training & Compliance

- ↑ 98% training compliance rate
- 0 expired certifications during the first six months
- No missed compliance deadlines after implementation

Operational Efficiency

- ↓ 60% reduction in incident reporting time
- ↓ 45% reduction in administrative workload for the safety manager
- Eliminated paper forms across all active jobsites

CONCLUSION

By moving from manual workflows to EHS Insight, this growing construction company modernized its safety program without adding complexity.

With faster reporting, consistent inspections, automated training tracking, and centralized compliance tasks, the company now protects workers more effectively — while reducing administrative burden and supporting continued growth.
